## SUMMARY

Aspiring Software Engineer with strong foundations in Java, Data Structures Algorithms, and Spring Boot backend development. Passionate about building scalable backend systems, REST APIs, AI-powered applications, while continuously strengthening expertise in System Design and Databases.

## EDUCATION

**Maharaja Agrasen Institute of Technology**  
*B.Tech in Electronics Engineering CGPA: 7.65/10*  
**Harmilap Mission School**  
*Class XII – 80%*

Delhi  
*Aug 2024 – Jun 2028*  
Kanpur, Uttar Pradesh  
*2021 – 2023*

## EXPERIENCE

### Research and Development Intern

June 2026 – August 2026

*DRDO – Solid State Physics Laboratory*

*New Delhi*

- Designed and implemented digital logic modules using Verilog HDL for FPGA/ASIC-oriented applications.
- Developed, simulated, and verified digital circuits using industry-standard EDA tools, ensuring functional correctness through comprehensive testbenches.
- Collaborated with mentors on digital design workflows, coding standards, and documentation within a research-oriented environment.

## PROJECTS

### DevPilot – AI Engineering Copilot | Spring Boot, Redis, Vector DB, AI

Dec 2025 – Present

- Developed an AI-powered developer assistant for automated repository analysis, intelligent code reviews, and software engineering workflows.
- Implemented GitHub integration, dependency visualization, security auditing, and architecture validation for repositories.
- Built scalable backend services with REST APIs, authentication, caching, and real-time repository insights.

### Schedura – Scheduling and Booking System | Next.js, Prisma, PostgreSQL

- Developed a full-stack scheduling and booking platform with secure Google OAuth authentication.
- Integrated Google Calendar API for automatic event synchronization and Google Meet link generation.
- Built a dynamic availability management system to minimize booking conflicts and improve scheduling efficiency.

### Secure Online Judge Platform | Spring Boot, React, PostgreSQL, Docker, Redis

- Developed a scalable online coding platform featuring secure Docker-based code execution, contest management, and real-time leaderboards.
- Implemented asynchronous code execution using job queues, JWT authentication, role-based access control, and optimized submission processing.
- Designed RESTful APIs with caching, submission analytics, plagiarism detection, and performance monitoring for efficient code evaluation.

## TECHNICAL SKILLS

**Languages:** Java, C/C++, SQL (PostgreSQL), JavaScript, HTML5, CSS3

**Frameworks & Libraries:** Spring Boot, React.js, Node.js, FastAPI, JUnit, Material-UI

**Databases:** PostgreSQL, Redis, Vector Databases

**Developer Tools:** Git, Docker, IntelliJ IDEA, Eclipse, VS Code, Google Cloud Platform

**Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, REST APIs, System Design, Authentication, JWT

## ACHIEVEMENTS

- Selected for the **Prototype and Final Presentation Round** at the **Fintechstico v6.0 Hackathon** organized by NSUT.
- Participated in the **AI Hiring Show** organized by Rabbitt Learning.
